about me

I class myself as an extremely hard-working individual. I strive to achieve and impress so that I can look back and know that I have done something successful in life. I put the needs of others before mine, and believe to be a generous person. I have a passion to learn and this is one skill that I wish to keep ongoing. Things are ever changing and I wish to know every little detail about everything around me. I am a problem solver, I like riddles and situations that challenge me, something that pushes me. I am a team worker, and get on well with others around me, I also do well when left to my own devices.

I have a valid driving licence and currently live with my partner in a rented property. I have never been involved with the police and therefore have no criminal convictions.

hobbies

Technology rules my life, I enjoy building computers, solving hardware and software issues. Building websites, creating layouts, and designing images for people. I push myself to learn any new software and believe I have the ability to understand the most complicated pieces of software. I have a passion for coding, I like to find new little pieces of code that will somehow improve a website in either a small, or large way.

I have a strong love for design and I enjoy reading history on design movements and key products throughout time.

Music is another aspect of my life that I hold dear, I currently play the guitar, piano, and drums, and my future desire is to learn the violin. I enjoy gaming as well, be it online, or on my own. When watching television I prefer to watch comedies and stand-up.
